

Creating an Inclusive Workplace with Adapt-IT and Dolphin

Adapt - IT is excited to announce a new partnership with Dolphin!

Bringing a cost-effective Enterprise level capability to make IT accessible to people who are blind or have sight loss.

We are incredibly excited to be able to announce our partnership with Dolphin Computer Access and the ability to provide an Enterprise level software capability to support people who are blind or have sight loss within the workplace across the US.

Providing accessibility through the power of Dolphin with the support services of Adapt-IT's IT Accessibility and Cyber Security professionals. If you are a retailer or Cyber Security provider, we can help you become accessible.

Personalise Dolphin to Suit your Employees' Sight

In an Enterprise there will be differing needs of each of its staff from the sight support they need to the jobs they need to carry out. Dolphin enables powerful personalisation to maximise an employee's productivity whatever function or role they have.

- Sharp Magnification
- Multiple Monitor Support
- Text to Speech
- Screen Reading
- Connect and View Document Scanning and Video Magnifier
- Braille Support
- Scan and Read

1 in 47 people suffer with visual acuity loss or blindness. 13% of this number is below the age of 40. Meaning the majority of people with vision acuity loss are a business' most experienced people. The older the age demographic the higher the percentage. With the workforce working for longer, the need for Sight Support increases.

Adapt - IT's approach as part of a balanced accessibility technology suite, can provide unparalleled power to support productivity for employees new and old who suffer from sight loss or blindness.

SuperNova Enterprise: What is in the Box

- The full Dolphin SuperNova suite of applications with added Enterprise Support.
- Deploy SuperNova Enterprise from your network server to provide your colleagues with screen magnification and screen reading as standard.
- SuperNova Enterprise offers flexible licencing to ensure it's the most cost-effective assistive tech of its kind.

Screen Magnifier

Text magnification and colour adjustment features make on-screen work more comfortable for staff with low vision or partial sight.

Screen magnification and customised colour schemes can be used independently for different Windows applications, and over multiple monitors.

Screen Magnifier & Speech

Assists your colleagues with sight loss, partial sight or vision that fluctuates throughout the working day. It provides flexibility to explore the computer screen contents in different ways.

Neurodiverse employees may also find that adjustable colour schemes and speech functions aid comfort and concentration

Magnifier & Screen Reader

Supports employees who are blind or partially sighted to fully explore the screen and read with audio or braille displays.

This edition combines a full screen reader with screen magnification, to meet a wide variety of needs. It provides flexibility to future-proof the workplace for people with fluctuating sight and progressive sight loss.

The Power of Adapt-IT Accessibility Services

Adapt-IT is driven to 'Make IT Accessible for All' and its focus is purely on accessibility and inclusion within the workplace. Our specialists focus on assistive technology within the Enterprise providing value add services to your Enterprise directly or through your IT support company. The Adapt-IT accessibility framework consists of multiple modules that can be taken as a complete end to end service, or as individual parts as needed.
